

Pairwise Coverage

- ❑ Target at 2-way Interaction: Given **any** two variables, every combination of values of these two variables are covered in at least one test case.
- ❑ Also called 2-way coverage, pairwise testing.
- ❑ A pairwise test set of the previous example is the following:

	P1	P2	P3
A		1	x
A		2	x
A		3	x
A		-	y
B		1	y
B		2	y
B		3	y
B		-	x

$P1 = (A, B)$, $P2 = (1, 2, 3)$, and $P3 = (x, y)$,
